

IMIS Global Limited

Press release

Date **May 2009**

IMIS Global Limited has completed the second phase of an upgrade of the Croatian AIS network. The second phase converted the AIS **Physical Shore Stations [PSS]** to being fully redundant including redundant. The upgrade included adding the **MariWeb™ Base Station Controller [BSC]** to existing AIS PSSs. The additional features that this upgrade brought to the AIS PSS include:

- ∴ VHF Datalink Layer [VDL] and WAN security
- ∴ A flexible WAN interface
- ∴ Swap between two AIS PSS in hot standby mode
- ∴ A web based **Human Machine Interface [HMI]** on the BSC
- ∴ 3 months of local data storage with smart restore
- ∴ Implementation of all ITU-R.M1371-3 messages

The central office equipment (the **MariWeb™ Central Data Server [CDS]**) was upgraded from ITU-R.M1371-1 capabilities to ITU-R.M1371-3 capabilities.

The second phase of the upgrade was completed after the first phase had been completed.
